FLUID COMMANDER
Electronic Dispensing Control 308238M

120 Vac, 60 Hz, 0.40 Amps
FOR INDOOR USE ONLY

Model 235531
1 Fluid to 12 Stations; U.S. Measurement

Model 235532
2 Fluids to 6 Stations; U.S. Measurement

Model 232077
2 Fluids to 6 Stations; Metric Measurement

Model 241905
1 Fluid to 12 Stations; U.S. Measurement; Includes air and fluid solenoid valves, pulse meter, and check valve

Model 232076
2 Fluids to 6 Stations; U.S. Measurement; Includes air and fluid solenoid valves, pulse meter, and check valve

Model 240448
2 Fluids to 6 Stations; Metric Measurement; Includes air and fluid solenoid valves, pulse meter, and check valve

Read warnings and instructions.
Keep for reference.

Symbols

Warning Symbol

⚠️ WARNING
This symbol alerts you to the possibility of serious injury or death if you do not follow the instructions.

Caution Symbol

⚠️ CAUTION
This symbol alerts you to the possibility of damage to or destruction of equipment if you do not follow the instructions.

⚠️ WARNING
EQUIPMENT MISUSE HAZARD
Equipment misuse can cause the equipment to rupture or malfunction and result in serious injury.

- This equipment is for professional use only.
- Read all instruction manuals, tags, and labels before operating the equipment.
- Use the equipment only for its intended purpose. If you are uncertain about usage, call your Graco distributor.
- Do not alter or modify this equipment.
- Check equipment daily. Repair or replace worn or damaged parts immediately.
- Do not exceed the maximum working pressure of the lowest rated system component. See the instruction manuals of the individual system components for their maximum working pressures.
- Handle hoses carefully. Do not pull on hoses to move equipment.
- Route hoses away from traffic areas, sharp edges, moving parts, and hot surfaces. Do not expose Graco hoses to temperatures above 66°C (150°F) or below –40°C (–40°F).
- Do not stop or deflect fluid leaks with your hand, body, glove, or rag.
- Follow the Shutdown Procedure on page 12 whenever you stop dispensing; or clean, check, or service the equipment.
- Comply with all applicable local, state, and national fire, electrical, and safety regulations.
**WARNING**

**FIRE AND EXPLOSION HAZARD**

Improper grounding, poor ventilation, open flames or sparks can cause a hazardous condition and result in a fire or explosion and serious injury.

- Connect the electronic dispensing control to a grounded outlet. Ground the other equipment as instructed in their separate instruction manuals.

- All electrical products must be wired by a qualified electrician.

- The control and all electrical products described in this manual must be installed in a non-hazardous location.

- If there is any static sparking or you feel an electric shock while using this equipment, **stop dispensing immediately**. Do not use the equipment until you identify and correct the problem.

- Keep liquids away from the electrical components.

- Disconnect electrical power at the main switch before servicing the equipment.

- Keep the dispense area free of debris, including solvent, rags, and gasoline.

- Do not smoke in the dispense area.
**Installation**

* These parts are included with Model 232076, 240448, or 241905.

---

**NOTE:** The Electronic Dispensing Control is referred to as the “control” in this manual.

**How the Fluid Commander System Works**

The operator programs the control by selecting a fluid and station and setting the quantity to dispense. When the operator presses the DISPENSE key, the control energizes the respective air and fluid solenoid valves. As the fluid is dispensed, the pulse meter sends pulses to the control in proportion to the amount of fluid flowing through it. When the number of pulses counted by the control is equivalent to the preset quantity, the air and fluid solenoid valves shut off. Refer to Operation for more detailed information on using the system.

**NOTE:** The Typical Installation shown above is only a guide for a basic system, showing just one fluid. Call your Graco representative to design a system to suit your needs.

**WARNING**

**COMPONENT RUPTURE HAZARD**

A Pressure Relief Kit is required in your system to reduce the risk of serious injury, which can occur if excessive pressure ruptures the lines and components. Install Kit 237893 as shown in Fig. 1. See page 18 for ordering information.
Installation

**WARNING**

**COMPONENT RUPTURE HAZARD**
Be sure that all accessories and system components can withstand the pressures developed. The maximum fluid working pressure of the Fluid Commander System is 1500 psi (10.4 MPa, 103 bar). Never exceed the maximum working pressure of the lowest rated accessory (valve, pipe, fitting, hose, etc.) in your system.

**NOTE:** The accessories mentioned in this manual are shown on pages 16 and 17.

Mount the Control

Place the control on a desktop or mount it on a wall, and locate it at least 18 in. (441 mm) off the floor.

**WARNING**

**FIRE, EXPLOSION, AND ELECTRIC SHOCK HAZARD**
To reduce the risk of fire or explosion, and serious injury, including electric shock:

The control and all electrical products described in this manual must be installed in a non-hazardous location.

All electrical products must be wired by a qualified electrician, following all local, state, and national codes.

Connect the control only to a grounded outlet.

Connect the Electrical Wiring

Determine the wire gauge to use based on the length of the run:

- Up to 200 ft (61 m): 18 AWG
- 201 to 500 ft (152 m): 16 AWG
- 501 to 1000 ft (305 m): 14 AWG

Page 6 shows the recommended wiring schematic, using Graco supplied cables, valves, and pulsers.

---

**CAUTION**

If you do not use the recommended air and fluid valves, verify that the valves do not exceed 0.6 amp of supply current when operated with 24 Vdc.

Pages 7 and 8 show the alternative wiring schematic, using customer-supplied cables with Graco-supplied valves and pulsers.

Page 8 shows where the wires connect at the rear of the control, depending on the number of fluids you are using. Fig. 2, below, shows how to make the electrical connections at the control, using the supplied probe.

**CAUTION**

To ensure correct polarity of the electrical supply, use only the power supply cord supplied with the control. Any other power supply cord may permanently damage the control.

Apply Labels to the Control

Determine what fluids will be dispensed, and apply the appropriate labels within the raised area on the control, next to the station pads. See Fig. 3, page 11.
Installation – Recommended Wiring

Example uses Graco supplied cables, valves and pulsers. See Accessories, pages 16–17.

Recommended Wiring for Fluid Solenoid Valves

Recommended Wiring for Fluid Pulsers and Air Solenoid Valves
Installation – Alternative Wiring Scheme

NOTE: Wire size is dependent on distance from control module to solenoid valve.

Alternate Wiring for Fluid Solenoid Valves

[Diagram showing wiring connections for FLUID ONE and FLUID TWO with stations labeled 1 through 16.]
Installation – Alternative Wiring Scheme

Alternate Wiring for Fluid Pulsers and Air Solenoids

- Fluid 1 Pulsers: P/N 236763 or 236764
- Fluid 2 Pulsers: P/N 236763 or 236764

FLUID 2 AIR SOLENOID P/N 215407
Installation – Wiring at Control

Two Fluids To Six Stations

Station Numbers

+ = RED or WHITE
– = BLACK

One Fluid To Twelve Stations

Station Numbers

+ = RED or WHITE
– = BLACK
Operation

**CAUTION**

To prevent the system from overheating, do not leave the control in the dispense mode without dispensing for longer than 1 hour.

**NOTE:** Refer to Fig. 3, page 11.

### Program the Security Code and Set the Units of Measurement

A four digit security code is required to activate the control after turning it on. This prevents unauthorized use of your system. Refer to the instructions on the last page of this manual to set the security code.

The control is factory-set to dispense in quarts (U.S.) or liters (metric). Refer to the instructions on the last page of this manual to change the units of measurement. Tear out the last page and keep it in a secure place.

### Activate the Control

Turn on the switch at the rear of the control. During power-up, all display segments must show and all station and dispense lights must light steadily for 3 to 4 seconds. When the display shows four dashes, enter your security code.

### Enter the Order

Press the station number key for the appropriate fluid. The light on the key will come on.

Press the white keys firmly to enter the amount.

*For example,* to enter 25.4 units, press the 10 twice, the 1 five times, and the 0.1 four times.

If you make a mistake, press STOP/CLEAR and enter the total amount again.

**NOTE:** Holding-down an amount key will cause the digit to change continually until the key is released.

Press DISPENSE. The digital display shows all zeros and the DISPENSE light blinks. As the order is dispensed, the display counts up and the fluid to the reel is shut off when the preset amount is delivered.

### To Check the Preset Amount During Dispense.

Press and hold AMOUNT PRESET. The order continues to be delivered unless you stop or clear it.

### To Stop the Dispense and Check the Preset Amount

Press STOP/CLEAR and then press and hold AMOUNT PRESET to verify the original order. Press DISPENSE to continue the order.

### To Stop or Clear an Order

Press STOP/CLEAR twice to cancel and clear the order.

**NOTE:** The control delivers just one fluid to one station at a time. During delivery, all pads are inactivated except AMOUNT PRESET and STOP/CLEAR.

### To Find the Total Units Delivered of Each Fluid

Press any station key for one fluid. Press and hold TOTAL to read the amount. Repeat for the other fluid.
Operation

KEYPAD FOR TWO FLUIDS TO TWO STATIONS

Fig. 3

Maintenance – Control

If Power is Cut off

1. Each control has a built-in backup battery for its memory. When power is restored, reactivate the control by entering the security code. The total amounts dispensed will be stored in memory. If power was cut off during a dispense cycle, the control will show the fluid, station, and amount already dispensed. Just press DISPENSE to continue.

2. The ON/OFF switch is also a 0.40 amp circuit breaker. If the system shuts off unexpectedly, switch it off and on again. If the problem continues, first check the hard wiring. If the control seems to be the problem, return it to Graco for repair.

To Clean the Control

Spray mild household cleaner (only) on a soft cloth and wipe the control clean. Do not allow the cleaner or any other fluid to seep under the front panel.

The Control is Not User-Repairsable

Do not open the control or attempt to make any repairs yourself.
Maintenance – Fluid Solenoid Valve

Shutdown Procedure

**WARNING**

**ELECTRIC SHOCK HAZARD**
To reduce the risk of serious injury, including electric shock or splashing fluid in the eyes or on the skin, always follow this procedure before servicing any part of the Fluid Commander system and before checking for loose or shorted wires.

1. Turn off the control and unplug it.
2. Shut off the power to the pump(s)
3. Relieve fluid pressure as instructed in your pump and/or dispensing valve manual(s).

To Clean the Solenoid Valve

The solenoid valve is normally closed. Foreign matter could hold the valve open, preventing it from stopping the fluid flow. If that happens, follow the procedure below.

1. Follow the **Shutdown Procedure**, above. Be sure to open the dispensing valve controlled by the solenoid valve to relieve line pressure.
2. Close the shutoff valve ahead of the solenoid valve.
3. Unscrew the nut, remove the operator, and unscrew the piston from the body. See Fig. 4.
4. Clean the parts and the seat in the body. Blow air into the body to clear the fluid passageways.
5. Reassemble the valve and dispense fluid to see if the open condition has been corrected. If it has not, replace the solenoid valve.

**NOTE:** Dispense fluid at the dispensing valve, controlled by the cleaned or replaced solenoid valve, until all air is purged from the system.
Maintenance – Pulse Meter

**WARNING**

**ELECTRIC SHOCK HAZARD**
To reduce the risk of serious injury, follow the **Shutdown Procedure** on page 12 before servicing the pulse meter.

**CAUTION**

To avoid damaging the electronic components of the pulse meter module (1):

1. Do not lay anything on the pulse module.
2. If you lay the pulse module down, make sure the open side faces up.
3. Do not twist or force the parts. Align parts properly as instructed.

To Replace the Complete Pulse Meter

1. Follow the **Shutdown Procedure** on page 12.
2. Disconnect the cable from the pulse module, taking note of the wiring polarity.
3. Remove the old pulse meter and install the new one, observing the original wiring polarity.

To Replace the Electronic Pulse Module

1. Follow the **Shutdown Procedure** on page 12.
2. Disconnect the cable from the pulse module, taking note of the wiring polarity.
3. Remove the screws. Lift off the pulse module.
4. Install a new pulse module (1). Align the notches on the underside of the pulse module with the cutaways in the top of the metering unit. Use the new screws and torque them oppositely and evenly to 10–12 in-lb (1.2–1.4 N\*m). See Fig. 5.
5. Connect the pulse module wires to the cable, observing the original wiring polarity.

To Replace the Metering Unit

1. Follow the **Shutdown Procedure** on page 12.
2. Remove the screws. Lift off the pulse module.
3. Remove the old metering unit.

4. Install a new metering unit (2). Align the notches on the underside of the pulse module with the cutaways in the top of the metering unit. Use the new screws and torque them oppositely and evenly to 10–12 in-lb (1.2–1.4 N\*m). See Fig. 5.

---

**Fig. 5**

Replacement screws, included with items 1 and 2. Torque oppositely and evenly to 10–12 in-lb (1.2–1.4 N\*m)

---

To Verify the Accuracy of a Pulse Meter Module

1. Use a clean, calibrated container. If using a single container, be sure to clean it after each dispense.
2. Have pump air pressure at the lowest possible setting for dispensing fluid.
3. Put the tip of the nozzle at the bottom of the calibrated container.
4. If the tip of the dispense valve does not reach the bottom of the calibrated container, use a length of plastic tubing over the tip of the nozzle to ensure liquid enters the container from the bottom.
5. Trigger the gun slowly so the fluid immediately covers the tip of the dispense valve.
6. Dispense 1 quart of fluid according to the metered display on the dispense valve.
7. Allow product to sit for 20 minutes, then compare the actual, physical measurement in the calibrated container to the measurement displayed on the meter.

**NOTE:** The procedure above will determine if the meter is accurately dispensing the product and minimize testing errors. Some variance may occur depending on the viscosity of the fluid. If this procedure determines that the meter is not accurate, recalibrate the meter as described in the service manual or replace the meter or the electronics as necessary.

FLUID SOLENOID VALVE 215487
TECHNICAL DATA

Type ........................ 2 way normally closed
Electrical Rating ............... 28 V DC, 0.46 amp
NOTE: provides minimum current draw when operated at 24 V DC
Coil Insulation .................. Class H
Leads .................. 18 AWG x 18 in. (457 mm) long
Maximum Working Pressure ...... 3000 psi
                                            (21 MPa, 207 bar)
Inlet/Outlet .................. 1/2 npt
Minimum Actuation Volts Required ...... 20
Wiring Gauge Required for
Length of Run .... 18 AWG up to 200 ft (61 m)
16 AWG 201 to 500 ft (152 m)
14 AWG 501 to 1000 ft (305 m)

FLUID SOLENOID VALVE 514150
TECHNICAL DATA

Type ........................ 2 way normally closed
Electrical Rating ............... 24 V DC coil, 10 watts
Leads .................. 3 wire; 2 similar wires used for DC connect. Third wire used for AC earth ground
Coil Insulation .................. General purpose, Class A
Encapsulated – Continuous Duty
Leads .................. 18 AWG x 12.0 in. (305 mm) long
Inlet/Outlet .................. Adapted to 1/2 npt
Wiring Gauge Required for
Length of Run .... 18 AWG up to 200 ft (61 m)
16 AWG 201 to 500 ft (152 m)
14 AWG 501 to 1000 ft (305 m)

AIR SOLENOID VALVE 215407
Technical Data

Type ............... 3 way solenoid operated air valve, normally closed
Electrical Rating ............... 24 V DC, 0.25 amps
Coil Insulation ............... General purpose, Class A
Encapsulated – Continuous Duty
Leads ............... 18 AWG x 12.0 in. (305 mm) long
Inlet/Outlet ............... Adapted to 1/2 npt
Wiring Gauge Required for
Length of Run .... 18 AWG up to 200 ft (61 m)
16 AWG 201 to 500 ft (152 m)
14 AWG 501 to 1000 ft (305 m)
Accessories

PRESSURE RELIEF KIT  237893
900 psi (6.2 MPa, 62 bar) Maximum Working Pressure

Relieves fluid line pressure when it exceeds 900 psi (6.2 MPa, 62 bar).

SHELF  186472
FEET OF CONTROL UNIT FIT IN THESE HOLES

- 9.25" (234.95 mm)
- 3.25" (82.55 mm)
- 10.0" (254 mm)
Technical Data

Fluid System Max. Working Pressure .. 1500 psi (10.4 MPa, 103 bar)
Power Input ......................... 110/120 volt, 60 Hz
Main Supply Voltage Fluctuations .. Not to exceed ± 10% of the nominal voltage
Circuit Breaker ...................... 0.40 amp

Units of Measurement
Totalizing ................................ Gallons/Liters to 19999
Dispensing ............................... 0.01 increments up to 199.99 Pints, Quarts, Gallons, or Liters

Power Supply Cord ................. 7.5 ft (2.3 m), 18 AWG, 3 conductor, molded vinyl plugs, 125 Vac, 10 amps
Control Power Output ............. 24 Vdc nominal at 0.60 amp maximum to any (1) fluid valve and any (1) air valve simultaneously
Backup Battery ....................... Lithium, 3.6 volt, 1.0 amp hour capacity (not replaceable)
Internal Fuses ......................... 2.5 amp, 250 volt, non-serviceable
Operating Temperature Range* .... +41 to 104°F (5 to 40°C)
Storage Temperature Range ........ −20 to +150°F (−28 to +65°C)
Maximum Relative Humidity ........ 80% for temperatures up to 88°F (31°C), decreasing linearly to 50% relative humidity at 104°F (40°C)
Installation Category ............... II, indoor use only

Height ................................ 4 in. (102 mm)
Weight ................................ 4.5 lb (2.0 kg)

* If the control is operated at higher ambient temperatures, periods of no flow must be more frequent and longer to prevent overheating.
Graco warrants all equipment referenced in this document which is manufactured by Graco and bearing its name to be free from defects in material and workmanship on the date of sale by an authorized Graco distributor to the original purchaser for use. With the exception of any special, extended, or limited warranty published by Graco, Graco will, for a period of twelve months from the date of sale, repair or replace any part of the equipment determined by Graco to be defective. This warranty applies only when the equipment is installed, operated and maintained in accordance with Graco’s written recommendations.

This warranty does not cover, and Graco shall not be liable for general wear and tear, or any malfunction, damage or wear caused by faulty installation, misapplication, abrasion, corrosion, inadequate or improper maintenance, negligence, accident, tampering, or substitution of non–Graco component parts. Nor shall Graco be liable for malfunction, damage or wear caused by the incompatibility of Graco equipment with structures, accessories, equipment or materials not supplied by Graco, or the improper design, manufacture, installation, operation or maintenance of structures, accessories, equipment or materials not supplied by Graco.

This warranty is conditioned upon the prepaid return of the equipment claimed to be defective to an authorized Graco distributor for verification of the claimed defect. If the claimed defect is verified, Graco will repair or replace free of charge any defective parts. The equipment will be returned to the original purchaser transportation prepaid. If inspection of the equipment does not disclose any defect in material or workmanship, repairs will be made at a reasonable charge, which charges may include the costs of parts, labor, and transportation.

THIS WARRANTY IS EXCLUSIVE, AND IS IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.

Graco’s sole obligation and buyer’s sole remedy for any breach of warranty shall be as set forth above. The buyer agrees that no other remedy (including, but not limited to, incidental or consequential damages for lost profits, lost sales, injury to person or property, or any other incidental or consequential loss) shall be available. Any action for breach of warranty must be brought within two (2) years of the date of sale.

GRACO MAKES NO WARRANTY, AND DISCLAIMS ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IN CONNECTION WITH ACCESSORIES, EQUIPMENT, MATERIALS OR COMPONENTS SOLD BUT NOT MANUFACTURED BY GRACO. These items sold, but not manufactured by Graco (such as electric motors, switches, hose, etc.), are subject to the warranty, if any, of their manufacturer. Graco will provide purchaser with reasonable assistance in making any claim for breach of these warranties.

In no event will Graco be liable for indirect, incidental, special or consequential damages resulting from Graco supplying equipment hereunder, or the furnishing, performance, or use of any products or other goods sold hereto, whether due to a breach of contract, breach of warranty, the negligence of Graco, or otherwise.

FOR GRACO CANADA CUSTOMERS
The parties acknowledge that they have required that the present document, as well as all documents, notices and legal proceedings entered into, given or instituted pursuant hereto or relating directly or indirectly hereto, be drawn up in English. Les parties reconnaissent avoir convenu que la rédaction du présent document sera en Anglais, ainsi que tous documents, avis et procédures judiciaires exécutés, donnés ou intentés à la suite de ou en rapport, directement ou indirectement, avec les procédures concernées.

Programming Security Code and Changing Measurement Units

For the Fluid Commander Dispensing Control

TEAR OUT THIS SHEET ALONG THE DOTTED LINE and keep it in a secure place after initially entering the security code and setting the measurement units.

TO PROGRAM YOUR SECURITY CODE

1. Turn on the control.
2. When the display shows – – – – press the following keys: DISPENSE, TOTAL, most lower right station key, and 0.1 key.
3. The display shows P P P P.
4. Enter any four station key numbers; this is your security code.
5. Enter the same four numbers again to activate the control.
6. Record the sequence of numbers and keep in a secure place.

TO CHANGE MEASUREMENT UNITS

(Gallon, Quart or Pint only – controls measured in liters cannot be changed)

1. Turn on the control.
2. When the display shows – – – – press the following keys: DISPENSE, TOTAL, most lower right station key, and TOTAL.
3. The display shows L1 and the station lights come on for the first fluid.
4. Press the 0.1 key to change the measurement units.
5. Press any station key for the next fluid, and press the 0.1 key to change units.
6. Press TOTAL to end.
7. Enter your security code to activate the control.
