is QS-9000 / ISO 9001 Certified.

WHEEL WEIGHT SELECTION SYSTEM – IMPORTANT! Alloy wheels come in a variety of rim styles. To insure proper, secure fit, selection of the proper weight is necessary. Our exclusive color-coded selection system makes correct application easy. We recommend the following procedure:

1. Use this color-coded application guide to select OEM weight type.
2. Verify application with color-coded rim gauge.
3. Select correct Aluma-Guard™ coated weight. Box labels are color-coded to match application guide and rim gauge.
4. Use color-coded wheel weight management system for storage of weights.

NOTE: For aftermarket or special OEM wheels, use the rim gauge to determine the best fit, or use Tape-A-Weight (TAW) adhesive weights.

POLYCAST® WHEELS: This wheel is steel with a cast polymer outside facing to resemble alloy wheels. Use alloy weights on outside flange, and Thinline weights for steel inside flange.

CHROME PLATED ALLOY WHEELS: Tape-A-Weight 9405-C chrome plated weights are recommended.

The primary weight listed is the weight for most common OEM wheels on this vehicle.

The secondary weight listed is a likely choice for optional or upgrade OEM wheel packages or other wheels where the primary weight isn't appropriate. If still unsure, use the rim gauge to make your selection.
