Automotive Style Couplers

- One hand push button design - red
- Fits all 1/4" automotive style adapters
- Longer lasting

Constructed of high impact tough composite material. Smooth finish will not scratch and will not hang up like traditional couplers. Press the button and the downstream air releases, and when the coupler is discharged it automatically releases adapter or hose, preventing dangerous hose whip. Use with any automotive nipple. Industrial use with 513811, 513911, and 11E.

Reelcraft: Heavy Duty Mobile Base Hose Reels

- Designed to accommodate up to 100' of 3/8" I.D. hose or 75' of 1/2" I.D. hose
- Slighty more robust than the standard 7000 series hose reels
- The heavy duty base design, all steel construction and a baked-on powder coat finish combine to produce a rugged, corrosion-resistant product
- A newly redesigned latching mechanism provides longer service life of the latch components
- The one-piece guide roller design and stainless steel pins offer greater strength and easier serviceability
- The high quality, die cast aluminum hub and two sealed ball bearings produce a smoother spool rotation and easier operation

Coil Hoses

Unlike a standard hose that lies flat and can be stored by loosely wrapping it or mounting it on a hose reel. Recoil hoses are designed in a tight coil cord similar to a telephone cord, retracts when released, and compresses for easy storage. Our recoil air hoses are ideal for manufacturing plants or at home workshops that often prefer recoil hoses since they take up less space and can be quickly and easily stored.

Quality valves assure trouble free service!

Why demand Dill?

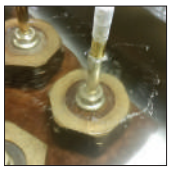

SINCE 1909 Dill Proven AMERICAN MANUFACTURER #DemandDill

Safety Risk Evaluations of Lower Quality Products

Dill valves are widely used by OEMs and fleets focused on consistent quality; but what about other aftermarket valves?

Cracked grommet during ozone test

Leaking valve during cold temperature testing

Lower cost valves often lack the quality control to have consistent material properties.

What does this mean?

To reduce costs, some imported valves replace key elements with substitutes such as zinc, nickel, silicon, and tin. These "DIY" alloys do not adhere to established material composition or performance standards, such as those set by ASTM.

Why does this matter?

Inconsistent material can lead to significant performance variations from lot to lot, affecting brittleness, strength, and resistance to corrosion.

Specialty Products carries Truck Axle Caster Shims in three different alloys, giving the technician the opportunity to match price point and mechanical requirements to meet their customer's needs. **Choose from Aluminum, ZINC and Manganese Bronze Shims.**

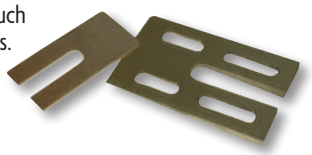

Truck Axle Shims

ALUMINUM ALLOY HD SHIMS These economical over-the-road heavy duty truck axle shims are our lowest cost option. With average compression strength and hardness these shims are available in a large variety of sizes and offer the technician a cost effective means to correct caster on over-the-road trucks and trailers.

ZINC ALLOY HD SHIMS These over-the-road heavy duty truck axle shims are a fast and accurate means to align front or rear axles of most popular tandem trailers and trucks. Specialty Products' new Zinc Alloy shims offer another level of performance versus our traditional aluminum shims. For a small cost increase versus aluminum, you now have the hardness of our premium manganese bronze shims and a much improved compression strength as compared to aluminum shims.

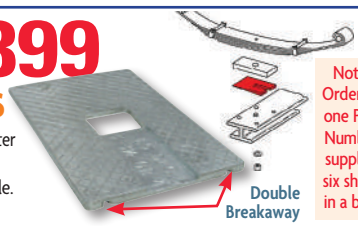

MANGANESE BRONZE HD SHIMS These shims are the standard. Top of the line compression strength and hardness means that when you set your alignment - it doesn't change.

DISTRIBUTORS WANTED

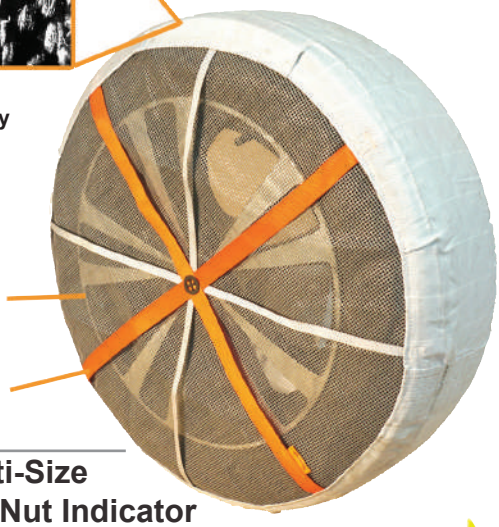

A specially designed surface pattern that makes the total contact area exposed to dry friction as large as possible.

AutoSock® gets fuzzy "hairs" between and at the contact areas in order to increase the friction on snow and ice.

Mesh keeps snow out of the tread and wheel well while the orange straps help with centering and easy removal.

Lug Lock Wheel Nut Retainers

Compatible with both Hexchex and Checkpoints

- Use the resistance between two nuts to minimize their ability to rotate and loosen
- Flexible and easy to install, fits over two adjacent nuts
- Application: Designed to be used on wheels with 33mm nuts on 3.5" stud centers
- Compatible with a complete wheel mounting safety program
- Other sizes and colors available

TPMS Profit Center

Remember, replacing the TPMS valve stem (snap-in rubber or clamp-in aluminum) or the TPMS service kit with each tire sale is done for the same reasons a traditional TR-413 snap-in is replaced with each new tire.

REDI-Sensor™

Simple and Accurate

REDI-SENSOR MULTI-APPLICATION SENSOR

7006HPR

- Installs right out of the box • No programming required, saving you 8-10 minutes per vehicle • Reduces replacement sensor inventory • Adjustable valve stem design • Fits over 90% of the market

WORKS WITH EXISTING MAJOR TPMS SCAN TOOLS:
If a shop has the tools to handle OE sensors, it's ready for REDI-Sensor. Unlike other sensors that require the purchase of specialized tools and software upgrades, no additional purchases, training or investments are needed with REDI-Sensor.

What's the difference between 5000 series and Redi?

1/4" Shaft Tool

- Larger spheres, tapers & rotor saw are excellent for high-tread skiving.
- Smaller spheres chamfer around injuries on liner; don't take a chance on entrapped air!
- For section repair or high-tread repairs on radial truck tires & hot repair on nail injuries for retreaders.

RUBBERHOG TIRE REPAIR

SSG Structured Carbide coatings and unique flared shape maximizes contact, producing a flat, level buffed surface!

Rubberhog carbides have a coating of randomly spaced sharp uniform conical teeth made from a very hard tungsten carbide material. It is the combination of the sharpness of the teeth, with the uniform height and shape of the teeth, that gives the Rubberhog rasp a fast, cool, superior buff texture resulting in a longer rasp service life.

(HW150400110)
ProCollet Kit 40mm
9 pc.
2.07" to 4.76"

The Low-Taper Collets are superior to standard cones because they have more contact area and engage the wheel at a better angle; they are also necessary for Clad Wheels because they are shorter and only contact the metal part of the wheel. They can be used for "standard" wheels as a replacement for the cones.

2027651 - Bullseye Collet Kit Gen $1,198.99

Kit includes:
A. 175-392-1 6 in. clamping cup
B. 46-653-2 Performance wheel & light truck spacer
C. 14-1470-005 Cone carrier bracket support
D. 56-70-2 Front balancer cone carrier
E. 20-2683-1 Passenger to 3/4 ton dual-taper collet kit
F. 106-157-2 Protector sleeve

2033581 - Collet Kit Economy MD $1,299.97

- Does not handle the large 8 lug/8.7" bore found on some medium duty trucks. 20-3155-1 covers that application and includes 20-3116-1. Includes application chart.

2036981 - Flange Plate and Stud Kit Adjustable $1,449.99

- This durable aluminum design can adjust from 98 to 210mm bolt patterns and covers almost all wheels in this range. It comes with (3) three sets of (5) five pins each to handle any application. These pins are 2, 2.5 and 3.25" long with diameters of 1 to .75" respectively.

6763 - PCD Wheel Bolt Measuring Tool - $12.99

- Can be used to measure a wheel or turned over to measure studs on a vehicle
- This wheel rim bolt pattern gauge is made of the best quality plastic material
- Lightweight and durable
- Quickly measures most common 4, 5, 6, 8 lug bolt patterns, it shows both inch and metric sizes.

Proper Piping for Compressed Air

- 100% aluminum for compressed air, copper ok as well.
- 288 PSI rated
- Aluminum offers excellent mechanical resistance to pressure and to impacts.
- The upgraded design of the new PPS1 aluminum fitting is more compact, lighter and more resistant.
- The aluminum alloy used, combined with epoxy paint on the outside and a treatment on the inside, protects the pipe against the risks of oxidation and corrosion.
- Simply insert the pipe into the fitting and then tighten the PPS1 fitting.

Did you know?

Using PVC pipe for compressed air is extremely dangerous because the material is brittle and prone to catastrophic, explosive failure. Unlike water, which is incompressible and releases little energy when a pipe leaks, compressed air stores massive amounts of potential energy—like a coiled spring. If a PVC pipe fails under this pressure, it does not just split; it shatters into sharp plastic shrapnel that can be propelled at high speeds, posing a severe risk of injury or death to anyone nearby. Furthermore, PVC's structural integrity is compromised by common compressed air conditions: its pressure rating can drop by half if temperatures exceed 110°F, and it can be weakened by exposure to UV light or certain compressor lubricants. Because of these lethal risks, OSHA has prohibited the use of above-ground PVC and CPVC piping for compressed air and gases.

Where Water Comes From

The atmospheric air entering a compressor intake contains water vapor. Because of the effects of compression, most of this water vapor turns into troublesome liquid water in your air lines.

The World's Most Trusted Lift™ A DOVER COMPANY

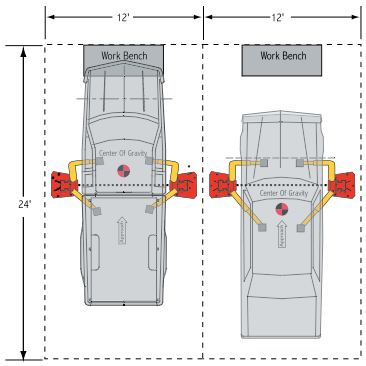

Rotary Symmetric / Asymmetric

Benefits of True Asymmetric Lifting:

- When the lift is loaded properly, doors can be opened and the vehicle is positioned a minimum of 24" away from the nearest obstruction.
- With true asymmetrical lifting, the columns are rotated 30° to place the approximate center of gravity of the vehicle in line with the optimum load capability of the column, reducing unnecessary wear and tear on the column, carriage and bearings.
- Asymmetrical lifting provides more clearance at the rear of the columns (the open door contact point) approximately 117" vs. 103".

Versymmetric®* / 2-in-1 Lift

Pitfalls of Versymmetric / 2-in-1 Lifting:

- When the lift is loaded, long vehicles that should be loaded symmetrically extend too far forward, leaving no room for work benches or walking area. Asymmetrical lifting positions the vehicle too far back, which intrudes into the drive-through area or even an exterior bay door.
- Versymmetric lifting places the approximate center of gravity of the vehicle in front of or behind the optimum load capacity of the lift. By doing so, wear and tear on the column, carriage and bearings is increased.
- No spotting dish makes vehicle positioning "Guesswork".
- The front arm is offset 5" which requires short wheelbase vehicles be pulled further forward to clear the front tire, which reduces the clearance to open doors.

Versymmetric and 2-in-1 style lifts have short arms on the front and long arms on the rear. This is done to accommodate the pick up points of vehicles that are shifted to the rear in order to improve open door clearance for the technician getting in and out of the car. In a symmetric load condition the vehicle is centered fore and aft (not shifted to the rear). The short front arms are unable to reach the pick up points in the symmetric load condition. This can be easily demonstrated by picking up an F350 as shown.
