**WHEEL WEIGHT SELECTION SYSTEM – IMPORTANT!** Alloy wheels come in a variety of rim styles. To insure proper, secure fit, selection of the proper weight is necessary. Our exclusive color-coded selection system makes correct application easy. We recommend the following procedure:

1. Use this color-coded application guide to select OEM weight type.
2. Verify application with color-coded rim gauge.
3. Select correct Aluma-Guard coated weight. Box labels are color-coded to match application guide and rim gauge.
4. Use color-coded wheel weight management system for storage of weights.

NOTE: For aftermarket or special OEM wheels, use the rim gauge to determine the best fit, or use Tape-A-Weight (T-A-W) adhesive weights.

**POLYCAST® WHEELS:** This wheel is steel with a cast polymer outside facing to resemble alloy wheels. Use alloy weights on outside flange, and Thinline weights for steel inside flange.

**CHROME PLATED ALLOY WHEELS:** Tape-A-Weight 9405-C chrome plated weights are recommended.

### Color Codes/Weight Types

Weight Type	Unit	Color Code
AWN	ounce	Red
MCN	ounce	Yellow
IAW	gram	Blue
EN	gram	Green
FN	gram	Orange
LH	ounce	Purple
TN	ounce	Grey
BMN	gram	White
MBN	gram	White

Color appears on label, application guide, rim gauge, and storage bins.

## Aluma-Guard™ The Alloy Wheel Guardian

Today's expensive alloy wheels demand protection. Coated weights are recommended for all alloy applications to avoid corrosion and staining. Aluma-Guard™ is the OEM approved polyurethane coating that is electrostatically applied then baked on for durability. Aluma-Guard™ is the first choice of today's drivers.

Use Tape-A-Weight (T-A-W) adhesive weights for special applications.

**WHEEL WEIGHT SELECTION SYSTEM – IMPORTANT!** Alloy wheels come in a variety of rim styles. To insure proper, secure fit, selection of the proper weight is necessary. Our exclusive color-coded selection system makes correct application easy. We recommend the following procedure:

1. Use this color-coded application guide to select OEM weight type.
2. Verify application with color-coded rim gauge.
3. Select correct Aluma-Guard coated weight. Box labels are color-coded to match application guide and rim gauge.
4. Use color-coded wheel weight management system for storage of weights.

NOTE: For aftermarket or special OEM wheels, use the rim gauge to determine the best fit, or use Tape-A-Weight (T-A-W) adhesive weights.

**POLYCAST® WHEELS:** This wheel is steel with a cast polymer outside facing to resemble alloy wheels. Use alloy weights on outside flange, and Thinline weights for steel inside flange.

**CHROME PLATED ALLOY WHEELS:** Tape-A-Weight 9405-C chrome plated weights are recommended.
