Rim Clamp® Tire Changer

For servicing single piece automotive and most light truck tire/wheel assemblies

Parts Identification

READ these instructions before placing unit in service KEEP these and other materials delivered with the unit in a binder near the machine for ease of reference by supervisors and operators.

HENNESSY INDUSTRIES, INC.

1601 J. P. Hennessy Drive, LaVergne, TN USA 37086-3565 615/641-7533 800/688-6359 www.ammcoats.com
HENNESSY INDUSTRIES INC. Manufacturer of AMMCO®, COATS® and BADA® Automotive Service Equipment and Tools.

Manual Part No.: 8184378 13
Revision: 11/06

This exploded view diagram illustrates the assembly of a mechanical device, likely a small container or enclosure. The components are numbered as follows:

- 1**: Main rectangular body or housing.
- 2**: Internal structural component or divider.
- 3**: Small fastener or pin.
- 4**: Small rectangular component, possibly a latch or switch.
- 5**: Small circular component, possibly a gasket or seal.
- 6**: Large rectangular panel or door.
- 7**: L-shaped bracket or support.
- 8**: Small rectangular component, possibly a latch or switch.
- 9**: Long, thin rod or pin.
- 10**: Small rectangular component, possibly a latch or switch.
- 11**: Complex mechanical component, possibly a motor or actuator.
- 12**: Circular component with internal structure, possibly a lens or filter.
- 13**: Large cylindrical component, possibly a container or reservoir.
- 14**: Small rectangular component, possibly a latch or switch.
- 15**: Small rectangular component, possibly a latch or switch.
- 16**: Small rectangular component, possibly a latch or switch.
- 17**: Small rectangular component, possibly a latch or switch.
- 18**: Small rectangular component, possibly a latch or switch.
- 19**: Small rectangular component, possibly a latch or switch.
- 20**: Small fastener or pin.
- 21**: Small fastener or pin.
- 22**: Small fastener or pin.
- 23**: Small fastener or pin.
- 24**: Small fastener or pin.
- 25**: Small fastener or pin.
- 26**: Small fastener or pin.
- 27**: Small fastener or pin.
- 28**: Small fastener or pin.
- 29**: Small fastener or pin.
- 30**: Small fastener or pin.
- 31**: Small fastener or pin.
- 32**: Small fastener or pin.
- 33**: Small fastener or pin.
- 34**: Small fastener or pin.
- 35**: Small fastener or pin.
- 36**: Small fastener or pin.
- 37**: Small fastener or pin.
- 38**: Small rectangular component, possibly a latch or switch.
- 39**: Small rectangular component, possibly a latch or switch.

Rim Clamp® Tire Changer

All-Air Unit Compressed Air Requirements

COATS® 9024E Rim Clamp® tire changers require a compressed air power source and 115V, 25AMP electrical supply. Refer to the table below for exact specifications.

Tire Changer Model	Compressor Size
9024E	5 HP

Oiler and Water Separator Maintenance

The oiler and water separator (on units so equipped) require weekly service. Oil and water levels (indicated on the level gauge on the side of each bowl) should be checked regularly

1. On units without automatic drain (manufactured before August 1996), drain the water from the separator by unscrewing the petcock on the bottom of the bowl. Allow water to drain and tighten petcock securely by hand.

2. Add oil to the oiler if the fluid level is greater than 1/4" from the top of the gauge. Remove the filler plug in the top of the oiler, and add SAE 10W non-detergent oil or an air tool oil to bring the level up to 1/4" from the top of the gauge. Replace the filler plug and clean up any spilled oil.

3. On units manufactured before August 1996, adjust the oil flow by pulling the red flow adjustment ring up and turning it to increase or decrease the flow. Push the ring down to lock. Watch the formation of oil drops in the see-through oil chamber. Continually cycle the bead loosener through full strokes and count the drops during the cycles. The delivery of oil to the air line should be about 1 drop per 10 cylinder cycles. Adjust the flow as required.

Note: An alternate adjustment method for the oil flow is to turn the knob fully clockwise to stop the flow, then turn it back counterclockwise 1/4 turn.

Transmission Lubrication

The transmission in this machine is a sealed unit packed with grease and should need no regular maintenance.

Air Gauge Check and Recalibration

1. Inflate a standard 15" passenger car tire/wheel assembly to 32 PSI. Use a high quality stick-type pressure gauge to verify the pressure. Attach the tire changer's inflation hose to the valve stem and check the pressure reading on the air gauge. If it does not read 32 PSI, recalibrate the gauge.

2. Remove the screw-on lens. Loosen the 2 screws on the face of the gauge. Loosen them just enough so that the gauge face moves. Do not remove the screws.

3. Rotate the gauge face until the 32 PSI mark is aligned with the gauge needle. Tighten the 2 screws and replace the lens.

Danger, Warning, Caution, and Instructional Decals

Always make the cleaning of these important decals a part of your regular maintenance routine. If they are damaged or illegible, replace them immediately. Your safety, and the safety of others is involved!
