

ArcticPRO® RHS® 980H

Introducing the industry's
first J2788H "high-voltage
addendum" independently
certified A/C Service Machine

**Engineered
for hybrids*...
...perfect for all
R134a A/C systems.**

Some items shown
are optional.

RHS980H shown. The following models
manufactured by RTI are also SAE J2788H certified:
RHS980C, Bosch ACS 620H, Bosch ACS 625.

- **Three ArcticPRO RHS980 models now available**
 - Choose from the RHS980, which includes on-board oil injection; the RHS980C loaded with extra features like integrated printer, micron sensor and temperature probes; and the RHS980H for safe servicing of hybrid* vehicles.
- **J2788H "high-voltage addendum" independently certified**
 - The ArcticPRO® RHS980H is certified by an independent testing laboratory to the high-voltage addendum so it can service hybrid* and non-hybrid powered vehicles. The absence of on-board oil injection capability and a service hoses flush feature make this possible.**
- **Fast and accurate system performance**
 - RHS980 Series machines consistently outperform competitive models with faster service times and greater charge & recovery accuracy.
- **Leading edge equipment functionality**
 - The RHS980 series has one of the highest usable refrigerant capacities available.
- **Two-year warranty standard**
 - Typical 48-hour service turnaround
- **Equipment options available for expanded performance**

*The term hybrid is specifically referring to High Voltage Electric Drive Compressor Applications.
**Important! An SAE J2788 non-addendum certified machine equipped with on-board oil injection and service hose flush feature, should NOT be used for both hybrid* and non-hybrid vehicle servicing due to risk of vehicle shutdown and for technician safety.
